Use Web Maps Only

If this option is selected, when clicking on the Map Location button on the main application button bar, Google Maps will launch to locate the physical address. If the workstation has been installed with Microsoft MapPoint, then the MapPoint application would automatically be launched.

Note: If using Web Maps, in SedonaSchedule (Service Module) users are able to select from one of the following applications to map the site location:

- Google
- Bing
- Yahoo
- Rand McNally
