

Check for Updates

Last Modified on 01/09/2023 3:22 pm EST

Selecting this option will check the current version of the application installed at the workstation to see if it is the most current version available. A message will be displayed advising the User if the workstation is current or if a newer version is available.

Important Note: If a newer version of the software is available, User's should first consult with your company's system administrator. If a newer version of the software is installed at a workstation prior to updating the SedonaOffice database at the server, the User may be locked out of the software until the server is updated.
