Central Station Tracking Overview

Central Station Tracking is a setup option that may be activated to track Monitoring System information within SedonaOffice.   Activation of this feature is done in SedonaSetup / Sedona Modules.

▢

This option is only used by SedonaOffice customers who do not have their own central station. Keep in mind, if you decide to track information in central station tracking, you will probably be doing double-data entry; once into your monitoring system software and then again into SedonaOffice.

For companies that integrate with Bold Manitou or Stages, this feature is not available.

The options for tracking information are listed below. Follow the links for detailed information.

- Access Cards
- Call Lists
- Instructions
- Monitoring
- Schedules
- Tests
- Zones
- System Details

To be able to enter or edit existing central station tracking data, you must first open the System record in edit mode, then click on the C/S Info button which is located at the bottom of the form.
