

SedonaSetup - CM - Payment Methods

Last Modified on 06/26/2026 8:43 am EDT

□

Payment Methods are used in Payment Processing to identify the method by which you are receiving payments from your customers. The records that you create or edit in this table are selectable when entering your customer payments. This table is pre-loaded with the most common payment methods. If your company does not accept one or many of the payment types listed, you may mark that Payment Type record as Inactive.

If you are utilizing an up-to-date version of SedonaWeb, the Web Enabled tickbox to the bottom right controls whether your customers can enter the listed payment type on the SedonaWeb platform.
