

# SedonaSetup - GL - Define GL Segments and Length

Last Modified on 01/12/2023 2:04 pm EST

□

The GL Account Code Length is the only item on this setup form that may be modified. This is the number of digits all general ledger account numbers must be set.

The Branch and Category GL Code Lengths are fixed values, however if your company requires this to be a different value, inform your SedonaOffice trainer to make this modification.

When setting up your Branches and Categories, you will assign a GL Code to each Branch and Category. These GL Codes are used for grouping when designing financial statements using third-party applications.

GL Codes are not G/L Account Numbers; just a value to link to a Branch or Category for designing reports with third-party reporting applications.

Note: The title of the form is labeled FRX Setup; SedonaOffice no longer supports integrating with the FRX financial reporting software. This form label will be changed in the future.
