

SedonaSetup - SV - Holidays

Last Modified on 01/12/2023 3:37 pm EST

□

The Holidays setup table is used to identify which dates in the year your company will charge your customers a holiday rate if service is performed on a holiday in this table.

When labor is posted to a Ticket and the date of the labor falls on a holiday found in the Holidays setup table, the labor calculation for the service invoice will use the Holiday Labor Rate associated with the Service Level assigned to the Service Ticket.

Create one record for each of your holidays which your company observes and will charge a special Holiday rate.

If using this table, set up all your holidays for the next 12 months.

This table will need to be updated each year to add new holiday dates.
