

SedonaSetup - SV - Panel Types

Last Modified on 01/12/2023 3:37 pm EST

□

Panel Types are typically described as the main controlling device for the system that is or will be installed for a System.

Each Customer System record may be assigned a panel type within the System information form.

Your list of panel types does not have to be limited to intrusion and fire type panels; you may also use panel types to indicate any type of main device that controls a system (access control, radio or cellular backup etc.). Panel Types print on Installation Job Tickets and on Service/Inspection Tickets.

Create one record for each type of panel that is installed at your customer sites.
