

# SedonaOffice Count Script

Last Modified on 09/12/2024 5:20 pm EDT

:

The script below is commonly used during data conversions so the customer and data tech can verify the counts of customers etc are what they should be. It can also be used in day to day operation as a quick auditing tool.

```
declare @customerid int,
        @vendorid int,
        @partid int

--UPDATE:

set @customerid = 1 --Last CustomerID before import

set @vendorid = 1 --Last VendorID before import

set @partid = 1      --Last PartID before import

--Static code below

select distinct
