## How to fix a duplicate data error on customer creation

Last Modified on 09/12/2024 6:15 pm EDT

When a customer creates a new account the error message below may appear. This indicates a duplicate record is preventing the new account creation. The majority of the time the error is a duplicate zip code.

How to fix steps are below-

- Go to Sedona Setup > Geographic table > Zip Code
- Find the duplicate zip code
- Option #1 change the zip code, for example if it is 60013 change to 6001X. The reason this is the 1<sup>st</sup> option is Sedona may not let you delete the duplicate zip code.
- Option #2 Delete the duplicate zip code
