

Job Costing Screen

Last Modified on 09/16/2024 12:40 pm EDT

The Job Costing Screen

so Estimated

- How much you estimate your costs and revenue will be.
- Revenue is auto updated by billable items entered on the job.
- Cost are entered by manually typing in the numbers or using the auto calculate buttons.

so Actual

- Total amount billed on invoices for the job and total of all costs that have been entered on the job.
- Updates automatically when job is billed and when costs are entered.

so Variance

- Estimates - Actuals = Variance.
- The difference between what you thought your costs /revenue would be, and what they actual were.
- Updates automatically when the first two columns are updated.

so WIP

- Costs that have been entered on the job which are sitting in holding until the job is invoiced or closed.
- Updates automatically when costs are entered.

so RMR

- Estimated and actual RMR on the job
- Payback period – If job is sold at a loss this is the number of months until RMR billing has recouped the cost of the job.
