Job Costing Setup Tables Priority Order

Last Modified on 09/16/2024 12:46 pm EDT

The three primary job setup tables are:

1. Job Types
2. Install Company
3. Setup Processing (JM)

The above list is in priority order. There are some GL selection fields that appear in more than one of these tables. If you enter a GL account into one of these fields and not the others, the system will use the GL account you selected. If you enter a GL account for the same field in more than one of these setup tables, the system will use the GL account selected in the highest priority setup table.

For example, if you enter a different labor expense GL account in the Job Types, Install Company, and Setup Processing (JM) setup tables, the system will use the labor expense GL you selected in the Job Types setup table.
