

# 3 Ways to Bill Inspections

Last Modified on 09/23/2024 5:38 pm EDT

1. **Inspection Item Charges** – For use when inspection charges should be a specific agreed to amount. Enter that amount and the invoice item that should be used on the inspection record itself. This will be added to the ticket as a billable Other item.

2. **Inspection Linked Recurring** – For use when your inspection charges should be billed with the customer recurring, or when the customer recurring represents the inspection charges. Select a recurring line on the inspection record to tie the inspection to.

3. **Time and Material** – Enter labor, part, and other charges on the inspection ticket and bill for these as normal.

**Note:** None of these are mutually exclusive. You can use all or any combination of the above billing methods on the same inspection ticket.
