What Inspection Reports Do and Do Not Do

Last Modified on 09/23/2024 5:40 pm EDT

What Inspection Reports do:

- Allow you to save templates to inspection records
- Automatically add those templates to tickets created for that inspection
- Give technicians on the FSU the ability to see and download those templates so that they can be edited in a third party app
- Have a separate documents area where technicians can save documents edited this way

What Inspection Reports do not do:

- Allow an edited template to be saved back as the same document, it must be saved back as a new document
- Automatically add inspection documents technicians save as templates to auto generate on the next ticket
