Sedona API Forte rejecting transactions - invalid amount.....	3
Errors processing credit card since Sedona upgrade on 6.2.0.14	3
Special Upgrade/Installation Instructions.....	3
Supported Environments	3

SedonaAPI 2.0 Enhancements/Features

Add warning confirmation to service ticket part for Mobile

Note: This feature requires Sedona-X Mobile version 1.6.12.

In SedonaOffice on Inventory Setup for Negative Quantities, there is an option called Warning Message. When this was picked, SedonaWeb was not allowing users to add a part, which prevented Sedona-X Mobile users from adding a part when they should have received a warning. We added a new property (called WarningMessageConfirmed) to the ServiceTicketParts API to allow the API and Sedona-X Mobile users to bypass the error 'insufficient number of parts' just like SedonaOffice does.

Add endpoints to call new site/system link/unlink stored procedures

To accommodate integration functionality changes, new stored procedures were added in SedonaOffice to perform the linking and unlinking of sites and systems. We added new endpoints to call these stored procedures:

- POST /api/CustomerSite/CSIntegration/Link
- POST /api/CustomerSite/CSIntegration/Unlink
- POST /api/CustomerSystem/CSIntegration/Link
- POST /api/CustomerSystem/CSIntegration/Unlink

These endpoints will return 501 "not implemented" if the corresponding SedonaOffice stored procedure is not found.

We modified these endpoints to include new Integration Id parameter:

- PUT /api/CustomerSystem/AutoSystem
- PUT /api/CustomerSystem/AutoSystemEditBySystemId

If the corresponding SedonaOffice stored procedure has not been updated to accept the Integration Id parameter, it will be re-called without that parameter.

SedonaWeb 2.0 Application Corrections

Resolved Issues
Sedona API Forte rejecting transactions - invalid amount We resolved an issue causing Forte to reject payments as invalid.
Errors processing credit card since Sedona upgrade on 6.2.0.14 We resolved an issue that was giving users an error in the Sedona-X Mobile app when they tried to add a payment method.

Special Upgrade/Installation Instructions

If your company uses the SedonaWeb 2.0/SedonaAPI 2.0, IT will update the version at the same time as your SedonaOffice upgrade. This is to ensure compatibility with all modules using SedonaWeb 2.0/SedonaAPI 2.0.

Supported Environments

- This version of SedonaWeb 2.0/SedonaAPI 2.0 requires SedonaOffice version 6.2.0.15 or above.
- Server (where SedonaWeb 2.0 is installed) has Microsoft .NET 4.8 installed.
