

Sedona-X Mobile Release Notes

April 2026

Version 2.4.0

Enhancements/Features

We made various background improvements and technology upgrades. These improve the way images and popups are displayed on the latest iOS and Android devices.

Application Corrections

AlarmBiller/Sedona-X Mobile

Documents | Issue with camera under Docs section. Cannot upload the picture, receiving error [00153814]

Users reported receiving an error when trying to upload a picture under the Docs section. If users selected a picture from a folder (after a picture was taken and saved), they could upload it; but they could not take a picture and upload it without saving; however, the app functionality gave the impression that they could.

We resolved this issue by removing the metadata from a picture so it uploads without error. Metadata is additional information relates to a photo such as GPS location (where the photo was taken), date and time, and camera model and settings.

Special Upgrade/Install Instructions

Operating System — iOS devices and Android devices should be using the latest Android and iOS versions available for full compatibility, although earlier versions may be able to support the app.

SedonaOffice — SedonaOffice will need to meet the system minimums (below) to support the Sedona-X Mobile app.

SedonaWeb/SedonaAPI 2.0 — IT will need to update your SedonaWeb/SedonaAPI 2.0 version to meet the system minimum (below) at the same time as your SedonaOffice version. This is to ensure compatibility with the Sedona-X Mobile app.

(SedonaOffice) Supported Environments

Minimum System Requirements

- SedonaOffice version 6.2.0.22

- SedonaWeb/SedonaAPI 2.0 version 1.53.0
- Server (where SedonaWeb/SedonaAPI 2.0 is installed) has Microsoft .NET 4.8 installed
