# About This Document

This document provides information related new enhancements and software corrections for SedonaOffice version 6.1.0.33.

# Special Upgrade / Install Instructions

If upgrading to SedonaOffice 6.0 and higher, the following related updates are also required:

**FSU Updates** - iOS devices must be on iOS version 11 or newer. Please also check the app store for any updates to your FSU app

**SedonaWeb** - If your company uses SedonaWeb, IT will update your SedonaWeb version at the same time as your SedonaOffice version. This is to ensure the highest level of PCI compliance throughout all applications

**SedonaCloud/SedonaAPI 2.0 Setup** - If your company uses the SedonaAPI, IT will update your SedonaAPI version at the same time as your SedonaOffice version. This is to ensure compatibility with the SalesAutomation module.

If you are not a SedonaCloud customer, please review the requirements for the new API before requesting the update. For a copy of pre-install requirements, please contact: [sedonaoffice.support@boldgroup.com](mailto:sedonaoffice.support@boldgroup.com)

**Performing Update** - Once you have reviewed all of the above information, and followed all preparation steps, contact SedonaOffice support. We will note on your account that you have received the Release Notes and are ready for update. SedonaOffice IT will then contact you to schedule your update.

## Supported Environments

Minimum System Requirements:

Server is on Microsoft .Net 4.6.1

# Features and Enhancements

## Accounts Receivable

### Forte Submission Process Performance

**Description:** Improving the speed of submitting transactions through the Forte submission process by implementing an asynchronous model for the HTTP client.

## Application Corrections

### Accounts Receivable

#### Aging and Collections Not Updating

**Issue:** The system is not automatically updating the customer aging and the customer collection queues when eft transactions are posted.

**Solution:** We corrected the aging to run correctly for transaction types and ensured that it would not run multiples for transactions that are applied to more than one invoice.

#### Previously Funded/Z Transaction Duplicates

**Issue:** Some previously funded transactions were being entered twice when the settlement process was run as new EFT transactions and were automatically being marked as settled.

**Solution:** To resolve this issue, many things were corrected: Corrected setting properties for cloned transaction. Corrected linking Deposit batch to new transaction. Corrected clearing trace number on old transaction, this was causing duplicates as it would see a transaction matching the trace # in the wrong state during settlement processing. Corrected Aging not running for certain types of transactions. Corrected Aging running multiples if transaction applied to multiple invoices. Unified UserCode used by SedonEFTService to SedonaEFTService. Added Ability to Mock responses in Forte TestService. Removed some dead code clutter. Developed a Script for data correction to properly clear trace numbers on old transactions that should have been cleared.

# Job Management

## PO Expense GL Account Dropdown Not Working

**Issue:** When creating an expense PO from a job, the Expense tab GL Account drop-down list was not available.

**Solution:** The GL account drop-down in the expense tab is now there as expected.

# Service

## Service Invoicing

**Issue:** The issue appears to be that the stored procedure `Single_Customer_Age_Routine` is taking too long to execute, for customers with a large number of invoices. This stored procedure is run each time a service ticket invoice is created. The invoice creation fails because the stored procedure blocks other procedures from executing.

**Solution:** Removed duplicate queries and replaced a slow query within the stored procedure to decrease load time from roughly 8 minutes to a few seconds.
