Stored Procedures	3
Special Upgrade / Installation Instructions	4
Supported Environments.....	4
Minimum System Requirements	4

Enhancements/Features

Increase to Invoice Register Report Row Limitation

The Invoice Register report now has an increased row limitation. This allows the report to handle a larger amount of data without generating an error. We also changed the control for the Tax Table and Tax Group selection boxes to allow for a larger number of records. The control on these two fields will not show highlighting when selected. The selected records will be in bold lettering. Finally, the Invoice Register will also create temporary tables when creating the report.

Application Corrections

Accounts Receivable

Resolved Issues
<p>Unable to Process payment from an invoice</p> <p>Resolved by ensuring the 'P' invoice status is removed if the associated transaction is in a settled, rejected, or previously funded state.</p>
<p>Master Accounts Last Cycle Date Broken</p> <p>Resolved by updating the Last Cycle date on Master Accounts when the cycle invoicing is run.</p>
<p>EFT CYCLE PAYMENT Message: encountered unexpected character '<'</p> <p>Made the following changes:</p> <ul style="list-style-type: none">▪ Added logging of Forte calls to the SEFT_Service_Log table to capture what is sent to Forte and the responses received from Forte to help with troubleshooting errors.▪ The SEFT_Service_Log entries that are older than 180 days will be deleted when the SedonaEFTService “Settlement” process kicks off each day, so the log file does not grow into an unmanageable size.
<p>Run time error (Invalid property array index) when running invoice register report</p> <p>Resolved by changing the index for this to allow a large number of records.</p>

Job Management

Resolved Issues
Job Costing Not Saving Resolved this issue so that users can now add both service tickets and jobs in a bill.

Inventory

Resolved Issues
Inventory Adjustment Error - File Data Error - 3421 Application uses a value of the wrong type Resolved an issue that was causing an error when creating physical counts for warehouses when there were more than 999 warehouses by changing the format of the physical code to mm/dd/yyyy HH:mm:ss-12345 where 12345 is the warehouse code.

Report Manager

Resolved Issues
Credit amounts are not showing up on the Income by Category report Resolved this issue by updating the query to include negative balance accounts on the Income by Category report

Stored Procedures

Stored Procedures Updated:

None

Special Upgrade / Installation Instructions

If upgrading from a SedonaOffice version prior to 6.0, the following related updates are also required:

Legacy SedonaWeb 1.0 - Be aware that if your company uses Legacy SedonaWeb 1.0 (latest version 2.7.80) with SedonaOffice version 6.2.0.8 and earlier, we recommend that you transition to using SedonaWeb 2.0. Legacy SedonaWeb 1.0 is not for SedonaOffice 6.2.0.9 or later.

SedonaWeb 2.0/SedonaAPI 2.0 Setup - If your company uses the SedonaWeb/SedonaAPI 2.0, IT will update your SedonaAPI version at the same time as your SedonaOffice version. This is to ensure compatibility with the Sales Automation module.

If your company uses SedonaAPI in any manner (Sales Automation, Time & Attendance, eForms, or the SedonaAPI for integrations such as the Manitou integration), you need to update SedonaWeb/SedonaAPI to version 1.43.0 (or higher) when you update SedonaOffice to 6.2.0.10.

Performing Update - Once you have reviewed all the above information, and followed all preparation steps, contact SedonaOffice support. We will note on your account that you have received the Release Notes and are ready for update. SedonaOffice IT will then contact you to schedule your update.

Supported Environments

Minimum System Requirements

- Server is on Microsoft .Net 4.6.1
