Enhancements

Parts

Part pricing used to pull only part pricing level 1. This has changed. If you use part pricing levels 2-10 on the part edit to assign special pricing to parts for certain customers these special prices will now pull on the FSU.

Web Version Enhancements

Documents

Users can now upload up to ten documents at a time on the SedonaFSU web version.

Service Ticket Log

The service ticket log in SedonaOffice now notes when a signature has been captured by the FSU. This functionality currently only works on the FSU web version and will be added to the iOS version in the next release.

Application Corrections

Review Tab

Technicians were not always receiving changes made in office to ticket warranties and service levels. This issue has been corrected.

Other Items

Inactive invoice items were appearing for selection. This has been corrected.

Custom Fields

Some users could only access custom drop downs with no access to custom free text fields, checkboxes, or dates. This issue has been corrected.

Service Report

When generating the service report the FSU was sometimes omitting part charges. This issue has been corrected. Speed of report generation has also been improved.

Web Version Corrections

Phone Number Format

The dashes in contact phone numbers were sometimes showing in incorrect places. This has been corrected.
