

# SedonaWeb/SedonaAPI 2.0 Release Notes

August 2024 (updated September 2024)

Version 1.47.0

---

## Contents

- SedonaAPI 2.0 Enhancements/Features.....2
  - Inventory endpoints .....2
  - Manufacturer endpoints.....2
  - Part endpoints .....2
  - Part supplier endpoints.....2
  - Product line endpoints.....3
  - Warehouse endpoints .....3
- SedonaAPI 2.0 Application Corrections .....3
  - Zip code geographic tables duplicate zip codes - using API version 2 endpoints [00105766] .....3
- Special Upgrade/Installation Instructions.....3
- Supported Environments .....3

## **SedonaAPI 2.0 Enhancements/Features**

### **Inventory endpoints**

We improved the validation for the add, update, and delete inventory endpoints. They also go through stored procedures like they should. The documentation for the Inventory model is available in your own local base endpoint: </help/index.html>.

### **Manufacturer endpoints**

We added GET, POST, PUT, and DELETE endpoints for manufacturer. The documentation for the Manufacturer model is available in your own local base endpoint: </help/index.html>.

### **Part endpoints**

We improved the validation for the part endpoints (POST, PUT, DELETE). They also go through stored procedures like they should:

- Complete overhaul of part validation, adding, updating, and deleting functionality.
- Added GET </api/CostingMethod> so a caller to POST/PUT </api/Part> knows how to populate the CostingMethod properties.
- Added GET </api/ManufacturerWarranty> so a caller to POST/PUT </api/Part> knows how to populate the ManufacturerWarranty properties.
- Added the KitParts property to the Part model. Previously there was no way to create a part that was a kit; update the parts in the kit; or see the parts in an existing part's kit.
- Added complete documentation to the following models seen in swagger:
  - CostingMethod
  - KitPart
  - ManufacturerWarranty
  - Part

The documentation for these models is available in your own local base endpoint: </help/index.html>.

### **Part supplier endpoints**

We created Part Supplier add/update/delete (POST, PUT, and DELETE) endpoints. The documentation for the PartSupplier model is available in your own local base endpoint: </help/index.html>.

## **Product line endpoints**

We added GET, POST, PUT, and DELETE endpoints for product line. The documentation for the ProductLine model is available in your own local base endpoint: /help/index.html.

## **Warehouse endpoints**

We improved the validation for the add, update, and delete endpoints for warehouse. They also go through stored procedures as they should. The documentation for the Warehouse model is available in your own local base endpoint: /help/index.html.

## **SedonaAPI 2.0 Application Corrections**

### **Zip code geographic tables duplicate zip codes - using API version 2 endpoints [00105766]**

We fixed an issue with using the API to create customers that was adding duplicate zip codes.

## **Special Upgrade/Installation Instructions**

If your company uses SedonaWeb 2.0/SedonaAPI 2.0, IT will update the version at the same time as your SedonaOffice upgrade. This is to ensure compatibility with all modules using SedonaWeb 2.0/SedonaAPI 2.0.

.NET Framework 4.8 automatically uses TLS 1.2. TLS 1.2 must be the only TLS version Enabled in the Registry. TLS 1.0 and TLS 1.1 must be disabled. Verify they are disabled and TLS 1.2 is enabled.

## **Supported Environments**

- This version of SedonaWeb 2.0/SedonaAPI 2.0 requires SedonaOffice version 6.2.0.17 or above.
- Server (where SedonaWeb 2.0 is installed) has Microsoft .NET 4.8 installed.
